

19" Patch panel euroclust standard serie - 1HU

Features

- Drawer version, with easy and quick opening system
- Optimal dimensions (insertion depth 250mm), by compliance of bending radius
- Adjustable mounting depth, through adjustable angles
- Integrated adjustable splice cassette holder with rotation protection. Designed for use of 4 cassettes, by using as Breakout box possible to remove holder without tools
- Ordered and fixed pigtail management on body bottom
- By open drawer will drawer stay hanging in 40° angle. The drawer can be easy removed without tools
- Various cable entry plates for PG or Metric, with possibility to change the left/right and straight/angled cable entry.
- Removable front plate with wipe proof signature
- Front plates available for all standard connector type

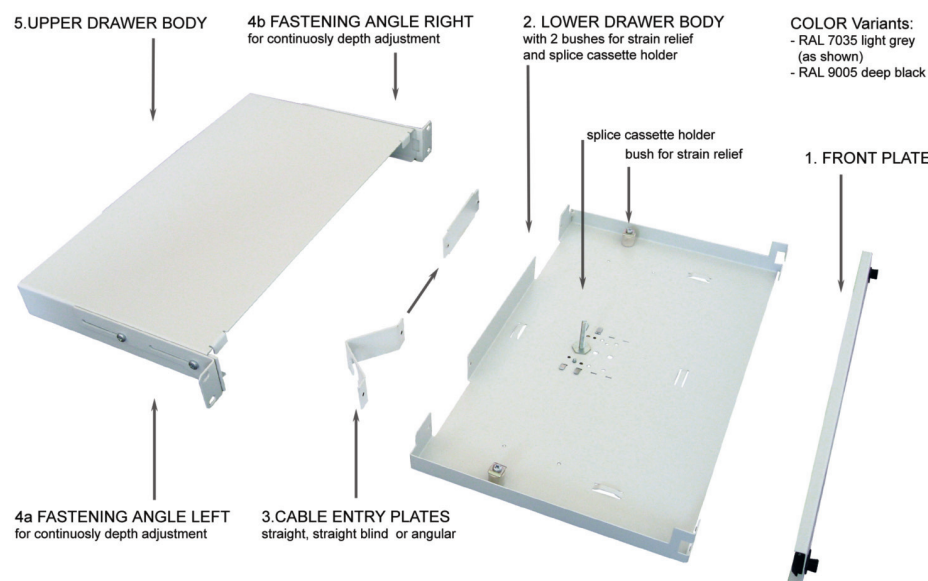

Product description:

euroclust Standard patch panels range is designed as fibre optic patch panel mainly used for finishing of cable with pigtail by splicing in splice cassettes and patching on frontplate. The panels have a sliding mechanism with a defined hard stop, what prevents the drawer from being pulled out completely in one step. Drawer can be pulled out from upper body, or can stay hanging on in angled position. This offers the installer a comfortable handling by new installation or maintenance work.

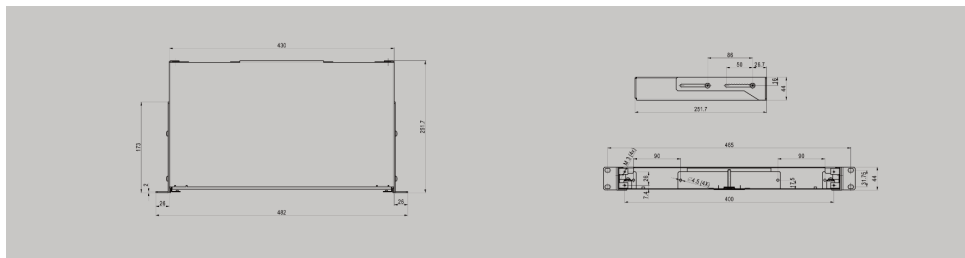

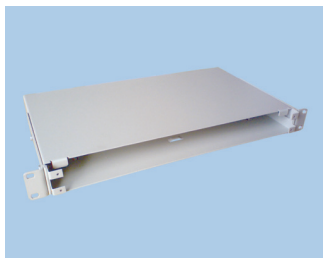

Patch panel configuration:

1. Select colour (powder coating RAL7035 light grey or RAL9005 deep black)
2. Select front plate (see page nr. 2-5)
3. Select cable entry plate (see page nr.11-12)
4. Possibility to choose management bar with labeling plate. See page number 6.
